PROJECTS

Qucik Hire

- QuickHire is a recruitment platform built using the MERN stack (MongoDB, Express, React, Node.js), integrated with Clerk for seamless authentication, user management, and role-based access control.
- supports two user types: Recruiters and Candidates, enabling job posting, application tracking, and candidate discovery.
- The platform features a dynamic and user-friendly dashboard for both Recruiters and Candidates, offering real-time updates, personalized job suggestions, and an intuitive interface to manage job applications and listings efficiently.

Olx App

- User-Generated Listings: Users can create, edit, and delete product ads with images, descriptions, categories, and pricing directly from a clean, responsive dashboard.
- Smart Browsing & Filtering: Buyers can search and filter ads by category, location, price range, and keywords to find relevant products quickly.
- Secure User Authentication: JWT-based login system ensures secure access to posting and messaging features, with role-based access and personalized user profiles.
